# v Introduction

**LOTTE Mart**

## ■ LOTTE GROUP

- The Affiliate Companies : 44 Companies
- LOTTE Group's Total Sales in 2006 : USD 31 Billion

## ■ LOTTE Shopping co., LTD

- 89th rank retailer in the world (2006) by NRF survey
- 1st rank retailer in Korea (2006)

**LOTTE Mart**

DEPARTMENT STORE  
**LOTTE**

**LOTTE super**

**Major Types**

Hypermarket

Department Store

Supermarket

**Sales (2006)**

USD 3.6 bill

USD 5.6 bill

USD 0.5 bill

- 3rd Largest in Korea
- 53 Stores

- 1st Largest in Korea
- 24 Stores

- 2nd Largest in Korea
- 52 Stores

# vProject Background

**LOTTE Mart**

## Why? Still VMI is not effective?

- A lot of pilot projects have improvement/ development manufacturers with unknown

Pilot test was successful but not extended to other manufacturers

gave various to other

- Through the VMI pilot and on shelf availability. However inventory level that we expected

Performance of delivery service and on shelf availability were good but inventory level was not good as we expected.

ery service in

- We thought that such a model could have been refined

Don't have an appropriate VMI model for Korean environment(Especially Store level)

appropriate

- Moreover, Project team organized process in supply chain.

Have a sympathy between Lotte mart and Manufacturers to reduce wastes

value added

- At this point, Johnson & Johnson organized a task force project, reasonable CPFR in long term

Project team have organized and had a short/medium/long term strategies

ment and adation of

- Project team agreed to use current issues more systematically

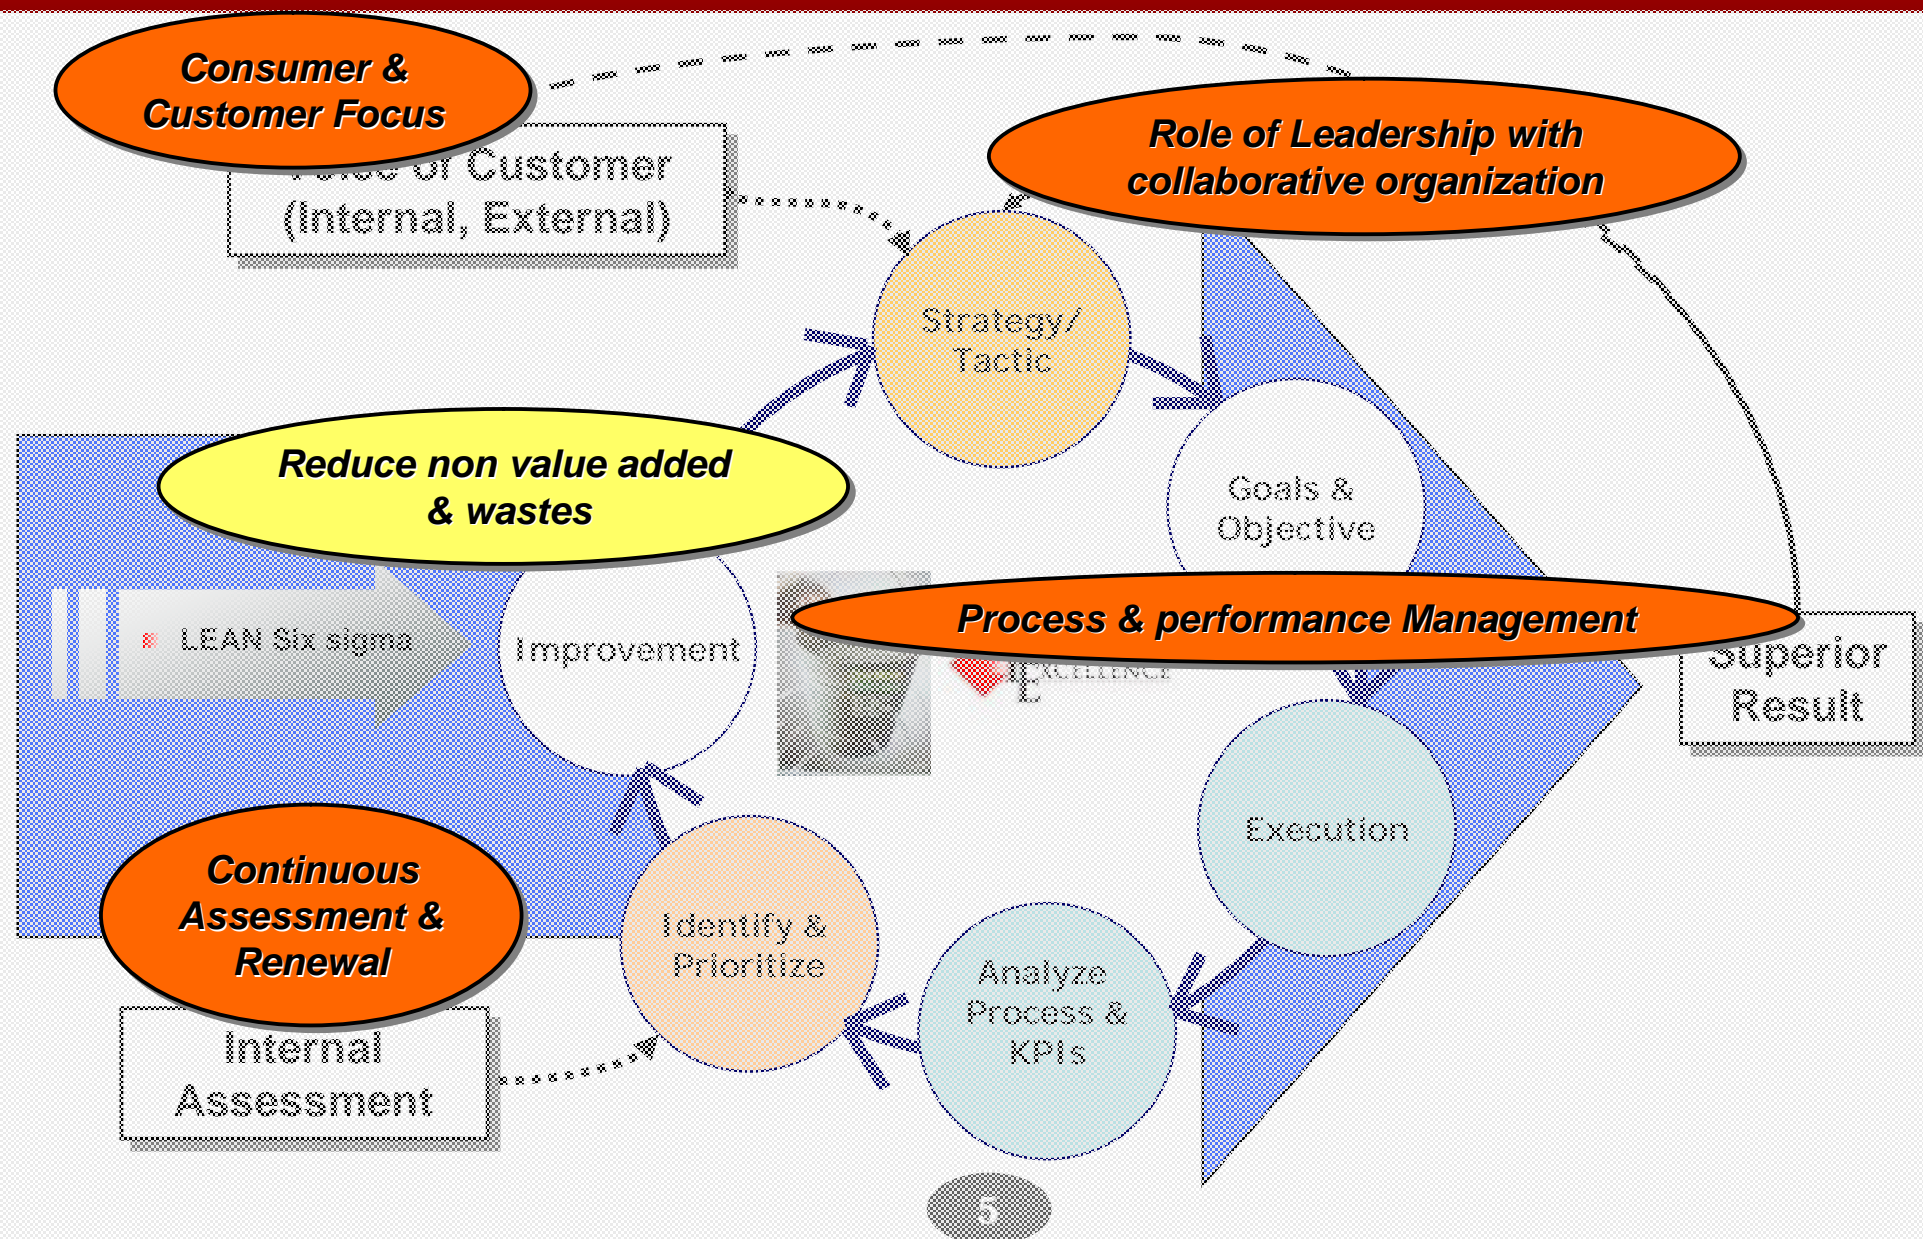

Project team agreed to use Lean six sigma tool to improve this VMI process

solved

# v Current Process Measurement

LOTTE Mart

## Measurement Summary

Voice of customer/  
Critical to Quality

SIPOC  
Value Stream Mapping/  
Self Assessment

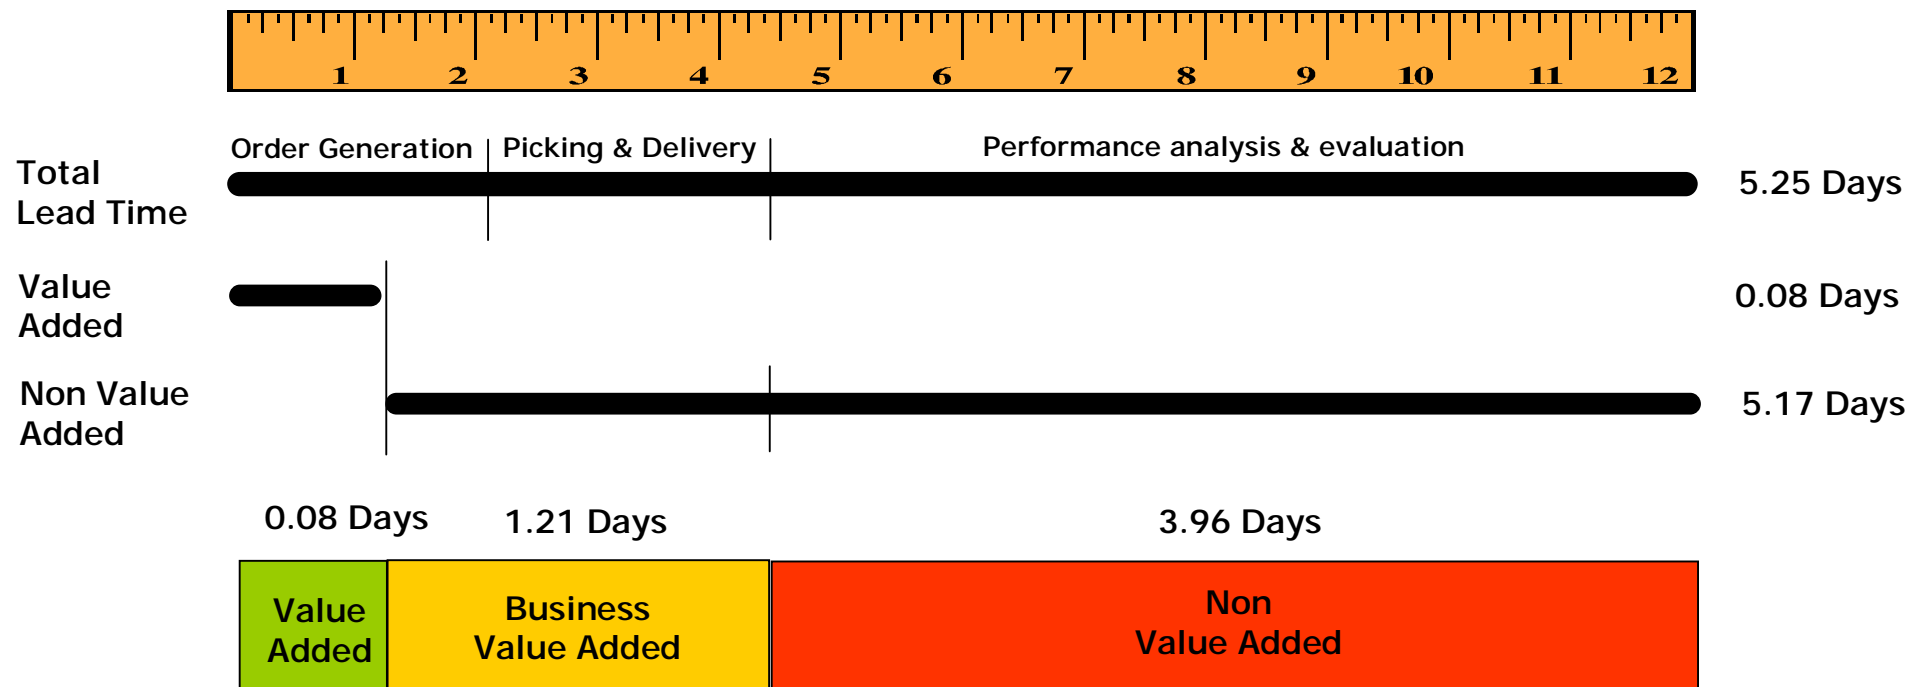

- Common and accurate information is important for VMI
- Synchronized and consolidated information that needs to be managed in one single data pool and window
- Realistic store level VMI KPIs should be realized with mutual agreements between manufacturer and retailer
- Much time has been spent to analyze VMI performance and KPIs that were absolutely non value added work and should be removed out from the process
- Some manual information/data sharing in VMI process which needs to be replaced to electronic data sharing process to enhance data accuracy as well as to reduce mis-communication

# Current Process Analysis

**LOTTE Mart**

## Long Lead Time by non value added work

Non value added work should be removed from the total lead time which has been impacted on VMI efficiency & effectiveness

# ✓ Current Process Analysis

**LOTTE Mart**

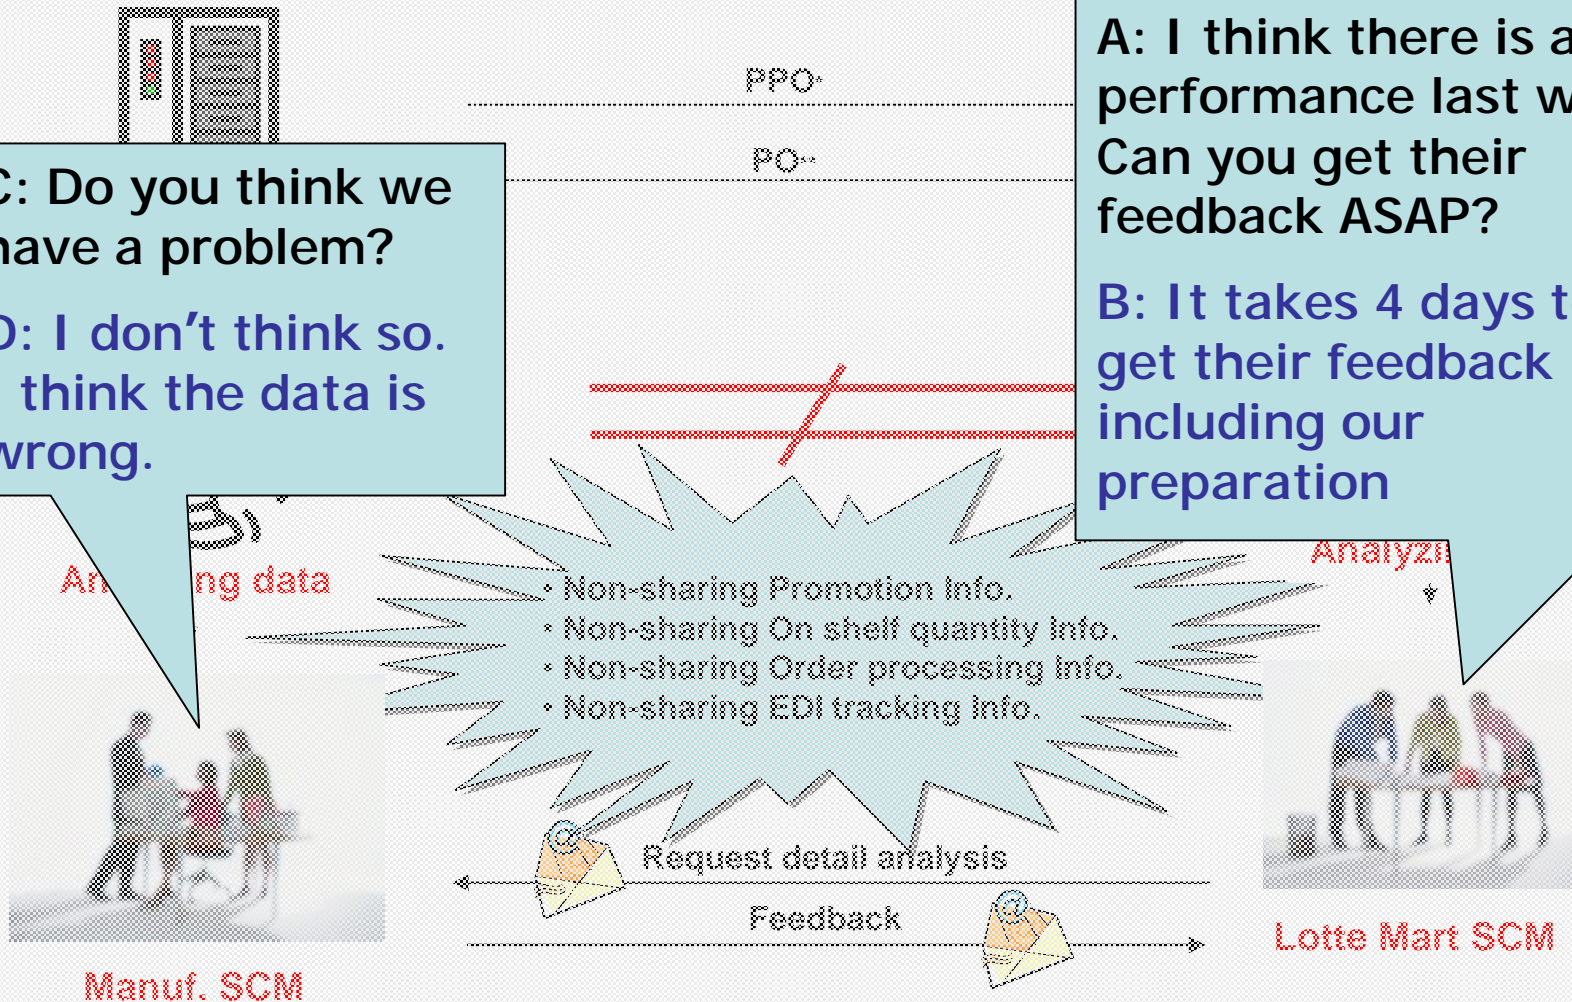

## No common information/data sharing pool

C: Do you think we have a problem?

D: I don't think so. I think the data is wrong.

A: I think there is a low performance last week. Can you get their feedback ASAP?

B: It takes 4 days to get their feedback including our preparation

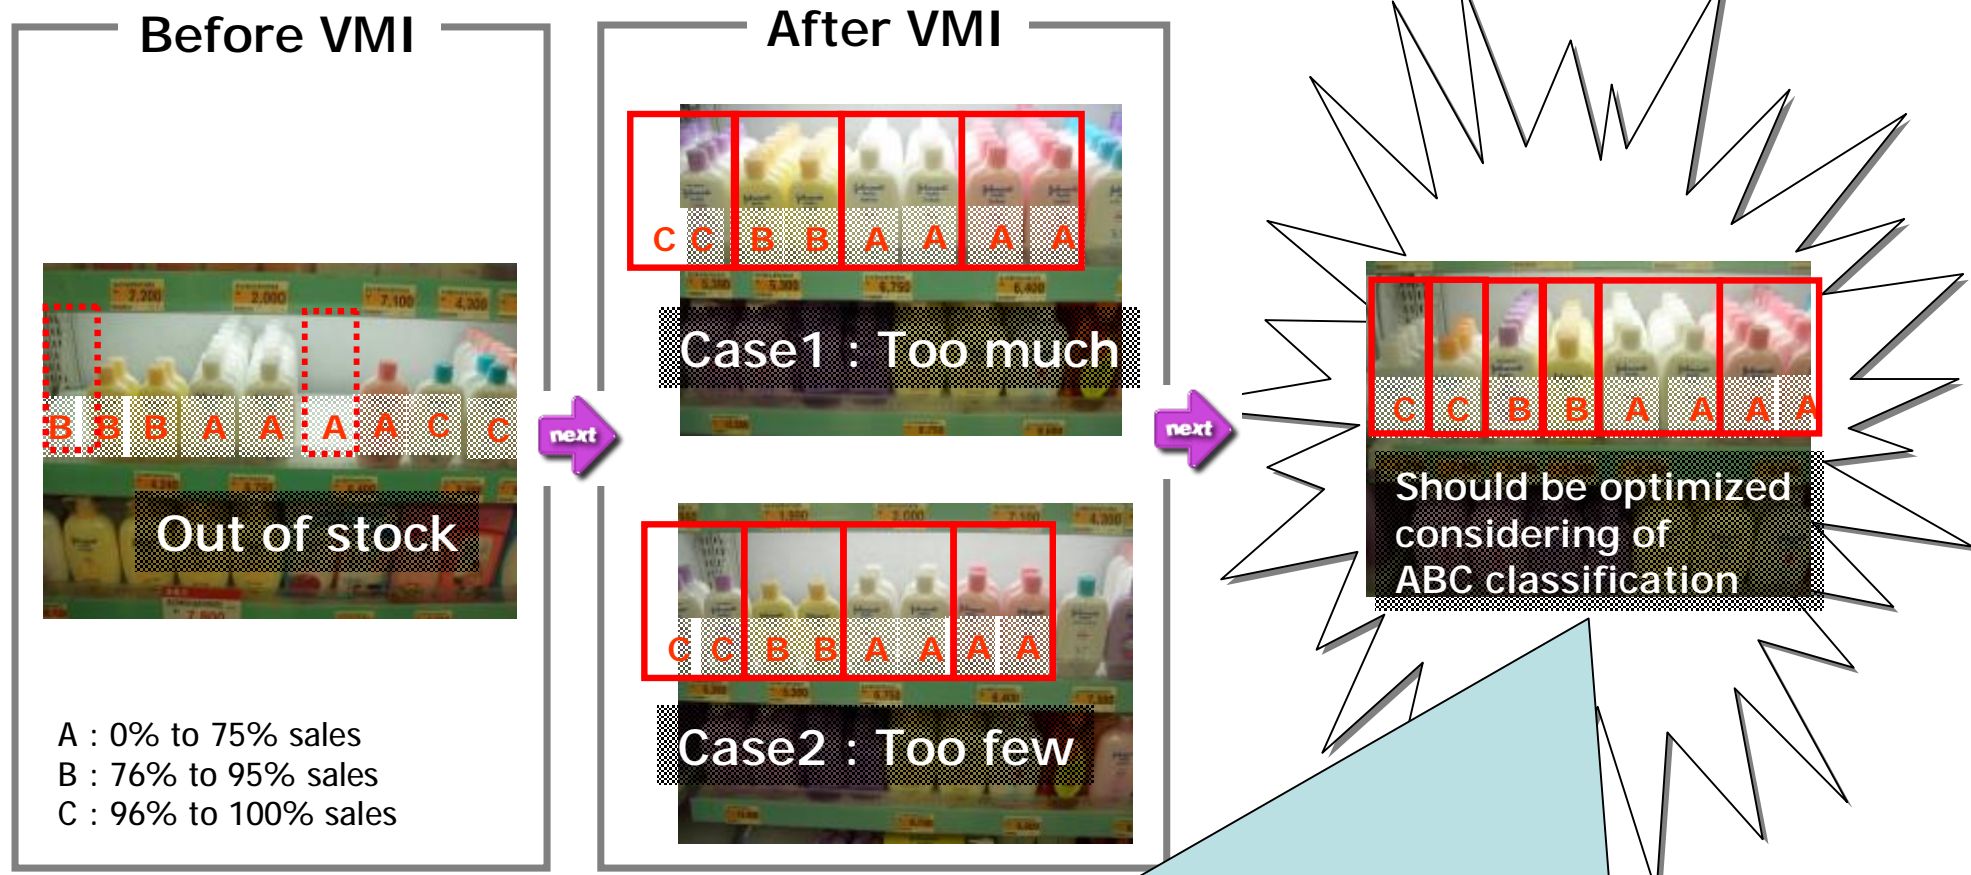

\*PPO: Pre-purchase Order

\*\* PO: Purchase Order

# Current Process Analysis

LOTTE Mart

## Realistic KPI : Optimizing stock on shelf

Both cases, having many inventories to prevent out of stock and having few inventories to reduce inventory, are not the realistic objectives for store level VMI. Subsequently, Having optimized inventories on shelf by ABC classification should be objectives in store level

# v Current Process Analysis

**LOTTE Mart**

## Summary of Analysis

- The assessment of performance has been executed manually by 4 days that is the biggest waste in total VMI lead time and should be removed.
- There is no seamless linkage between Manufacturers and Lotte Mart data pool that has been impacted data accuracy as well as reporting appropriate KPI numbers.
- One of KPI, Inventory level, has been measured simply such as just measuring performance versus last period numbers. It made no sense for the store level VMI which needed to be measured differently to optimize on shelf inventory by ABC classification.
- Subsequently it was hard to set up the realistic VMI goal and KPI's, and those had been a bottle neck to improve the process and finally VMI extension to other market was stopped with those reasons.

# v Improvement & Learning

## Process capability & Lean assessment

### Process Capability

The sample was displayed by process capability in normal and got a following data

|               | Before | After |
|---------------|--------|-------|
| PpK           | 0.25   | 1.36  |
| Yield         | 23%    | 99.5  |
| Process Sigma | 0.75   | 4.09  |

Ppk: Process Capability index

### Lean assessment

| Lean measurement             | Previous Result | After project Result |
|------------------------------|-----------------|----------------------|
| Total VMI Control Lead Time  | 120 min         | 150 mins             |
| Total VMI Control Cycle Time | 7,560 min       | 1,810 mins           |
| Value Added %                | 1.6%            | 8.3%                 |
| Lean Scoring                 | 3.9             | 4.5                  |

# v Implementation of VISS

LOTTE Mart

## What is VISS?

**VISS** means **V**endor **I**nformation **S**haring **S**ystem

- VISS provides common view between retailer and vendors (manufacturers) that remove non value added process and increase SCM efficiency from the various information.

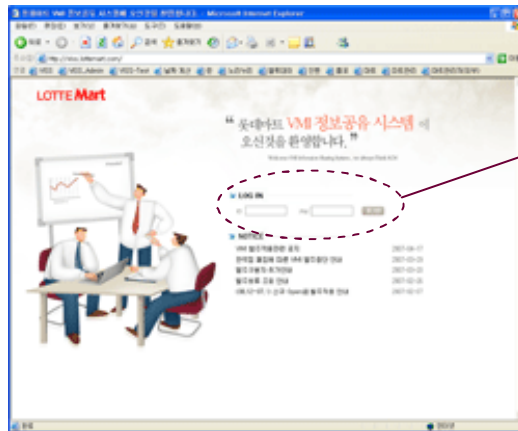

- VISS improves collaborative capability thru real time data analysis and feedback its result.

- VISS is realistic and unique SCM solution that can be synchronize data between retailers and manufacturers

# v Implementation of VISS

**LOTTE Mart**

## Process improvement

- Web based
- Easy Access
- User Authority
- High security

| 재고  | 판매   | 현재고 | 재고일수 | 매대전열 | 과다원인  |
|-----|------|-----|------|------|-------|
| 안전  | 적정   | 평균  | 전일   | 주간   |       |
| 9,5 | 59,5 | 3,2 | 8    | 36   | 30    |
|     |      |     |      | 9,5  | 10    |

## Documentation of Standard of Operating Procedure

### Critical to Quality

- Mutually agreed on KPIs
- Qualified & quantitative KPIs
- Realistic KPIs that reflect store level VMI
- Assign right place & person
- Common information between two companies
- On time information sharing
- Accurate information
- Enough & various information resources
- Synchronized information
- Easy to access information including KPI results

### Master Data

- Products
- On Shelf
- Store

### KPI

- Agreed Target
- Assessment result
- Feedback & Report

### Inventory

- On shelf
- Max/Minimum
- Optimize

### Order generation

- Regular
- Promotion
- Urgent

## v Summary

**LOTTE Mart**

- We, Lotte Mart and Manufacturers, had a **partnership thru commitment by setting up a short/mid/long term strategy** on the LEAN Six sigma roadmap.
- Through this project, our team **reduced the wastes and lead time by implementing VISS** that could be increased speed and productivity in the whole supply chain process.
- For the **optimization of inventory on shelf**, determining collaborated and synchronized inventory level was important by ABC item classification that should be managed systematically.
- Project team have a confidence to **go forward to the long term strategy** because we overcame such a complicated market environment by implementing collaborated team work.
- We hope that VISS case would be helpful to other companies if they really want to **enhance the communication between retailers and manufacturers for ECR**.

# vProject Roadmap
